ABOUT ME

Growing up I was always interested in computers, and wanted to know how they worked, and as I was getting close to graduating from high school I knew that I wanted to study computer science, so that I could learn programming. I ended up going to college for it at Tennessee Tech and University of Tennessee.

PROJECTS

Sniffer (Twitter for dogs):

TECHNICAL EDUCATION

Student

Nashville Software School | 2020 - present

- Nashville Software School's web development boot camp is 6 months of rigorous learning that gives the student the skills necessary to create coding projects from bottom to top, and leaves them prepared for an entry-level software development position.
- Working with JavaScript, CSS, HTML, React, and Python
- At NSS I have been making websites that utilize the responsiveness of React to keep the data displayed current. I have used JavaScript to get the data to the right place, and CSS and HTML to make it visually appealing.
- Group projects are a large part of the learning process at NSS, and I have been able to keep my team focused, and successfully plan our project to completion before we even started.
- Because of the global pandemic, class has been completely remote, and I have been able to learn just as well from home.

SERVICE/RESATAURANT INDUSTRY

Server

Texas Roadhouse | 2019 - 2019

- Working as part of a team of servers meeting tight deadlines of taking orders and delivering food.
- Worked as an opener and closer
- Dealt with and resolved several customer service issues

Busser

Chuy's | 2018 - 2018

- As part of a team of bussers we had to bus tables as fast as possible, and get them as clean as possible. We created strategies that would work for each person on the team, and got the tables cleaned.
- Helped servers as needed

EDUCATION

Nashville Software School 2020 - present

Full Stack web development bootcamp

- Working with JavaScript, CSS, HTML, React, and Python
- After learning React I was able to create an awesome project called "Sniffer" which is a website similar to twitter, but it's for dogs. I used React to reuse DOM components, and JavaScript to move data. I also used the Cloudinary API to host images for each user.
- Working on teams, and individually
- Working remotely

Tennessee Technological University 2017-2017

- Maintained a 4.0 GPA
- Studied C++, and utilized parallel processing
- Computer Science Major

Independence High School Class of 2017

- Played tennis, and won most supportive award for being the most encouraging.
- Led student section at sporting events, and got 400 of the 1100 students at every football game of the year, and got over 800 at one football game.

TECHNICAL SKILLS

- HTML, JavaScript, CSS, React, and Python
- Teamwork
- Communication
